

3-2 Reteaching

Properties of Parallel Lines

When a transversal intersects parallel lines, special congruent and supplementary angle pairs are formed.

Congruent angles formed by a transversal intersecting parallel lines:

- corresponding angles (Postulate 3-1)

$$\angle 1 \cong \angle 5 \quad \angle 2 \cong \angle 6$$

$$\angle 4 \cong \angle 8 \quad \angle 3 \cong \angle 7$$

- alternate interior angles (Theorem 3-1)

$$\angle 4 \cong \angle 6 \quad \angle 3 \cong \angle 5$$

- alternate exterior angles (Theorem 3-3)

$$\angle 1 \cong \angle 8 \quad \angle 2 \cong \angle 7$$

Supplementary angles formed by a transversal intersecting parallel lines:

- same-side interior angles (Theorem 3-2)

$$m\angle 4 + m\angle 5 = 180 \quad m\angle 3 + m\angle 6 = 180$$

Identify all the numbered angles congruent to the given angle. Explain.

1.

4. Supply the missing reasons in the two-column proof.

Given: $g \parallel h, i \parallel j$

Prove: $\angle 1$ is supplementary to $\angle 16$.

Statements	Reasons
1) $\angle 1 \cong \angle 3$	1) ? vertical \angle s
2) $g \parallel h; i \parallel j$	2) Given
3) $\angle 3 \cong \angle 11$	3) ? correspond
4) $\angle 11$ and $\angle 16$ are supplementary.	4) ? SSI - Same side interior are sup.
5) $\angle 1$ and $\angle 16$ are supplementary.	5) ? CST Congruent Supplements Theorem

3-2 Reteaching (continued)

Properties of Parallel Lines

You can use the special angle pairs formed by parallel lines and a transversal to find missing angle measures.

Problem

If $m\angle 1 = 100$, what are the measures of $\angle 2$ through $\angle 8$?

- Supplementary angles: $m\angle 2 = 180 - 100$ $m\angle 2 = 80$
- $m\angle 4 = 180 - 100$ $m\angle 4 = 80$
- Vertical angles: $m\angle 1 = m\angle 3$ $m\angle 3 = 100$
- Alternate exterior angles: $m\angle 1 = m\angle 7$ $m\angle 7 = 100$
- Alternate interior angles: $m\angle 3 = m\angle 5$ $m\angle 5 = 100$
- Corresponding angles: $m\angle 2 = m\angle 6$ $m\angle 6 = 80$
- Same-side interior angles: $m\angle 3 + m\angle 8 = 180$ $m\angle 8 = 80$

Problem

What are the measures of the angles in the figure?

- $(2x + 10) + (3x - 5) = 180$ Same-Side Interior Angles Theorem
- $5x + 5 = 180$ Combine like terms.
- $5x = 175$ Subtract 5 from each side.
- $x = 35$ Divide each side by 5.

Find the measure of these angles by substitution.

$$2x + 10 = 2(35) + 10 = 80 \qquad 3x - 5 = 3(35) - 5 = 100$$

$$2x - 20 = 2(35) - 20 = 50$$

To find $m\angle 1$, use the Same-Side Interior Angles Theorem:

$$50 + m\angle 1 = 180, \text{ so } m\angle 1 = 130$$

Exercises

Find the value of x . Then find the measure of each labeled angle.

$2x - 10 = 90$
 $2x = 100$
 $x = 50$

$4x - 10 + 8x + 10 = 180$

$12x = 180$
 12

$x = \frac{180}{12} = \frac{45}{3} = 15$

$3x - 20 + 2x = 180$
 $5x - 20 = 180$
 $5x = 200$
 $x = 40$

3-3 Reteaching

Proving Lines Parallel

Special angle pairs result when a set of parallel lines is intersected by a transversal. The converses of the theorems and postulates in Lesson 3-2 can be used to prove that lines are parallel.

Postulate 3-2: Converse of Corresponding Angles Postulate

If $\angle 1 \cong \angle 5$, then $a \parallel b$.

Theorem 3-4: Converse of the Alternate Interior Angles

Theorem If $\angle 3 \cong \angle 6$, then $a \parallel b$.

Theorem 3-5: Converse of the Same-Side Interior Angles Theorem

If $\angle 3$ is supplementary to $\angle 5$, then $a \parallel b$.

Theorem 3-6: Converse of the Alternate Exterior Angles Theorem

If $\angle 2 \cong \angle 7$, then $a \parallel b$.

Problem

For what value of x is $b \parallel c$?

The given angles are alternate exterior angles. If they are congruent, then $b \parallel c$.

$$\begin{aligned} 2x - 22 &= 118 \\ 2x &= 140 \\ x &= 70 \end{aligned}$$

Exercises

Which lines or line segments are parallel? Justify your answers.

$CD \parallel AB$,
by Alt
ext.

$WX \parallel YZ$ by Alt int

$QN \parallel LO$
by Alt in

Find the value of x for which $g \parallel h$. Then find the measure of each labeled angle.

$$\begin{aligned} 126 &\bar{=} 2x + 16 \\ 110 &= 2x \\ \bar{55} &= x \end{aligned}$$

$$\begin{aligned} 6x + 20x - 2 &= 180 \\ 26x - 2 &= 180 \\ 26x &= 182 \end{aligned}$$

$x = 7$

$$\begin{aligned} 3x + 6 &= 4x - 18 \\ -3x + 18 &= -3x + 18 \end{aligned}$$

$24 = x$
